Table 3: On the left, we see the variable name. For each of those, we consider each and every one of their regressions that have p-values greater than or equal to 0.05. Out of those, we obtain the regression specifications and keep a counter for how many of each type of specification there is. The top of the table (columns) signify which specification has how many counts of high p-values.

Table 4: The entries in this table are coefficients for regression #5, per year. We have 9+3 columns - one for each coefficient that is in the model and 3 more described in footnotes. Agg M&A, Agg Equity, Agg IPO, and GDP are excluded since the regressions are for one year and those variables are fixed for a given year.

 $^{^{1}}$ D.V. = Deal Value

 $^{^{2}}$ T. = Transactions

³Mean of the p-values of the interaction terms (covariate_i * year), where year=(2016 or X). Data includes year X and 2016.

⁴M&A Deal Value coefficient of year X vs. M&A Deal Value coefficient of 2016 (p-value)

⁵M&A Transactions coefficient of year X vs. M&A Transactions coefficient of 2016 (p-value)

Table 5: The entries in this table are coefficients. For each outcome variable, we have 2 rows - one is a "full" model, and one is a "subsetted" model. When performing the model averaging, the full one treats variables missing from the model as 0's, whereas the subset model averages coefficients only where that variable appears.

Breakpoint Analysis

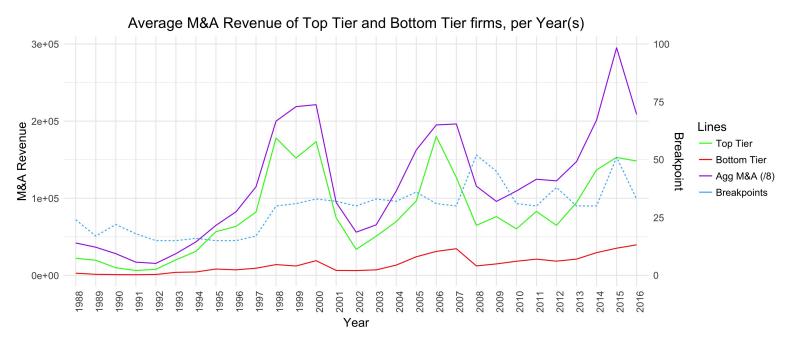

Model Selection

We have also generated this analysis when breaking up the data into 3 or more tiers, but they do not appear to show the differences as clearly as the two-tier models. We conjecture that if as we increase the number of tiers by which we factorize the data, there is a higher proportion of zeros in the resulting lowest tier. This causes hightened sensitivity in the signal of the data and deems the plot uninterpretable.

More Plots

The Aggregated M&A variable is divided by 8 for scaling purposes. Breakpoint is the pivot point between the two tiers.

	TopTier	BottomTier	AggM&A	Breakpoints
TopTier	1	0.782774843274932	0.946799173814814	0.480962466373272
